

Senior Software Engineer

Insight at a Glance

- Over 14,000 engaged teammates worldwide, operating across 25 countries.
- Recipient of more than 35 industry and partner awards in the past year.
- Generated \$9.2 billion in revenue.
- Ranked #20 on Fortune's World's Best Workplaces™ list.
- Ranked #14 at Forbes World's Best Employers in IT for 2023.
- Ranked #23 on Forbes Best Employers for Women in IT for 2023.
- Contributed over \$1.4 million to charitable causes globally in 2023.

Now is the time to bring your expertise to Insight. We are more than a technology company; we put people first. By empowering individuals and leveraging technology, we drive transformation and deliver extraordinary results. As a Fortune 500 Solutions Integrator, we possess deep expertise in cloud, data, AI, cybersecurity, and intelligent edge, guiding organizations through complex digital decisions.

Location: This is a remote opportunity, although we are specifically looking out for indicitDelhi NCR, Hyderabad, Bangalore, Pune, and Trivandrum

Your Mission

As a Senior Software Engineer , your mission is to build cloud-native applications that empower users to work more efficiently across a variety of use cases. Using a UX-driven approach, you'll focus on delivering APIs for web and mobile platforms, edge computing solutions, and orchestration for deployments and pipelines, all designed with performance, efficiency, and ease-of-use in mind.

At SADA, a premier Google Cloud Platform (GCP) partner, you'll help customers maximize their use of GCP technologies across diverse industries. This role offers a unique opportunity to gain broad experience solving complex challenges and developing scalable solutions in a dynamic, service-oriented environment.

Responsibilities

- Contribute to projects at all stages from early discovery and architecture to full end-to-end application development and technical consulting for customers.
- Effectively manage your time across 1–2 concurrent projects, working within teams that vary in size and scope.
- Work closely with solution architects, project managers, and engineers to define and deliver high-quality user experiences.
- Build reusable tools, processes, and solutions that drive efficiency and scalability for both SADA and its clients.

Pathway to Success

As you continue to execute successfully, we will build a customized development plan together that leads you through the engineering or management growth tracks.

Expectations

Required Travel - Limited (<5%) travel to customer sites, conferences, and other related events.

Customer Facing - You will interact with customers regularly, sometimes daily, other times weekly/bi-weekly. Common touchpoints occur when qualifying potential opportunities, at project kickoff, throughout the engagement as progress is communicated, and at project close. You can expect to interact with a range of customer stakeholders, including engineers, technical project managers, and executives.

Onboarding/Training - The first several weeks of onboarding are dedicated to learning and will encompass learning materials/assignments and compliance training, as well as meetings with relevant individuals. Details of the timeline are shared closer to the start date.

Job Requirements

Required Credentials:

- 7+ years of relevant work experience in software development more focused on backend development.

Required Qualifications:

- Expertise in development with any two of the following languages: Python, Node.js, and Go.
- Experience working with relational and NoSQL datastores and adjacent technologies (ORMs, schema migration tools).
- Experience designing, building, and maintaining high-quality, developer-friendly REST APIs using OpenAPI (Swagger) specifications.
- Exposure to full-stack development, from setting up application and database server infrastructure to developing and implementing application code.
- Ability to communicate complex technical concepts to a broad range of internal and external stakeholders.
- Extensive experience writing unit, integration, and acceptance tests.

Useful Qualifications:

- Experience using Google Cloud Platform, in particular serverless (Cloud Functions), containers (Cloud Run, Kubernetes), and platforms (App Engine).
- Hands-on experience designing, developing, and deploying AI-driven agentic applications and systems.
- Experience with MCP (Model Context Protocol) and ADK (Agent Development Kit).

- Experience interfacing with Architects and Product Management to design and implement solutions.
- Experience with Pub/Sub and event messaging technologies.
- Experience working with and diagnosing CI/CD pipelines (GitHub Actions, Bamboo, Jenkins, Harness, or GCP Cloud Build).
- Familiarity with frontend web technologies, particularly React and Angular.
